

Probation and Community Corrections

The purpose of the Probation and Community Corrections branch is to provide effective probation, diversion and conditional release services to reduce the need for commitment programs and to decrease the likelihood of repeat offenders victimizing the public. These programs provide supervision over youth to protect public safety, promote offender accountability through restorative sanctions and treatments, and to support youth in becoming responsible citizens.

By supervising and counseling juveniles in communities through diversion, probation and conditional release programs, the Probation and Community Corrections branch may be considered the most far reaching branch in the agency. The principle programming for this branch includes diversion, probation supervision, day treatment programs, conditional release services, post commitment probation, and a post-commitment probation residential program.

Diversion is targeted towards the early and less serious offenders and includes low-cost programs that administer sanctions and treatments designed to keep offenders out of the judicial system. Intensive Delinquency Diversion Services (IDDS) are provided through a competitively procured private service provider in each of the State's judicial circuits.

Intensive Delinquency Diversion Services (IDDS) is an alternative to formal court involvement and supervision for youth determined to be at high risk of becoming chronic offenders. The stated goals of IDDS include protecting the public, reducing recidivism and increasing responsible behavior. These programs are designed for youth who have been identified as most at-risk for becoming serious or chronic offenders. Assessment of risk is based on the presence of at least three of the four risk factors identified in *The 8% Solution: Preventing Serious Repeat Juvenile Crime*. These factors include school behavior and performance problems; family problems; substance abuse issues, including any regular use of alcohol or drugs; and pre-delinquent behaviors, such as running away.

IDDS programs provide intensive case management services to high-risk youth and their families. The contract with DJJ requires that services be provided six days per week and include services outside the normal 8 a.m. to 5 p.m. workday to ensure that youth and families have adequate access. Case management services include the following components:

- Treatment plan supervision
- Diagnostic evaluation services
- Social and life skill enhancement
- Substance abuse counseling
- Pre-vocational services
- Restitution
- Behavior management
- Mental health services
- Counseling services
- Community service
- Academic assistance
- Transportation

An integral part of program service delivery is the establishment of appropriate linkages with local resources that can provide services at a reduced cost. The length of participation is designed to be between five and seven months. Release from the program is based on the youth's performance in the program and an assessment of the potential for re-offending.

Probation Supervision and Special Intensive Probation programs are individualized court-ordered programs in which the youth are restricted to home or another designated placement in lieu of commitment to the Department. Juvenile probation officers (JPOs) supervise youth to ensure compliance with court ordered sanctions, such as restitution, community service or curfew. Special intensive probation provides more frequent face-to-face contact with youth than general probation.

JPOs have two principle functions, intake services for youth who are arrested and supervision and case management during the various phases of a youth's involvement with the Department. Intake services begin when the youth is brought to the JPO for a criminal history records search, screening for detention placement, a suicide risk assessment, a risk and needs assessment, and a mental health and substance abuse screening. After this initial contact with the youth, the JPO must interview the parents, the arresting officer and other parties in order to make a recommendation to the state attorney regarding whether to file a petition for court processing. The JPO has supervisory responsibility for those youth who are adjudicated delinquent but because of the minimal risk they pose to public safety are placed on probation rather than in a residential program.

Youth placed in residential commitment programs are assigned a JPO who develops a plan for transitioning the youth back into the community. In cases of long-term placements, the JPO has the responsibility of tracking the youth's progress to keep the court informed, to keep in touch with the family and to communicate with the victim.

For both probation and committed youth, a supervision plan is developed that describes what the youth must do to earn a recommendation for termination from supervision. The plan is based upon court-ordered sanctions and the needs of the youth and may also involve restitution to the victim and community service work. Supervision involves on-site contact with the youth at home, school or other venues. Contact must be maintained with family, school, school resource officers, law enforcement, and treatment programs to monitor behavior and compliance with court ordered sanctions.

Youth on probation supervision may be placed in day treatment programs designed for youth who represent a minimal risk to themselves and public safety and do not require services in a residential setting. Program groups in day treatment include vocational programs, marine programs, juvenile justice alternative schools, training and rehabilitation programs, and gender specific programs.

The Positive Achievement Change Tool (PACT) is used by the JPO to assess a youth's needs and risk to

public safety. The most appropriate level of probation supervision is determined based on risk factors statistically validated to predict risk to re-offend, including criminal history and the current offense. A reassessment instrument is completed every 90 days or sooner if a change in supervision is needed because of a new law violation or if the youth's degree of compliance changes. The frequency of contact with the youth is based on the score received on the instrument, the youth's compliance with court-ordered sanctions, and participation in treatment.

The duration of supervision as recommended by the Department is six months. Violations of probation include both new law violations and non-law or technical violations, such as chronic truancy or refusal to attend a day treatment program. The JPO may file an affidavit of violation of probation with the state attorney who will decide whether to petition for a hearing. The court approves final termination from probation. All circuits have special intensive probation officers.

Multisystemic Therapy (MST) is an intensive family and community based treatment that addresses serious anti-social behavior in youth. MST strives to promote behavior change in the youth's natural environment, using the strengths of each system (e.g., family, peers, school, neighborhood, existing support network) to facilitate change. The goal of MST is to empower parents to address the difficulties that arise in raising teenagers, and to help youth cope with family, peer, school and neighborhood problems. Within a context of support and skill building, the therapist places developmentally appropriate demands on the adolescent and family for responsible behavior.

MST incorporates an intensive quality assurance process. In a number of clinical trials outside the state of Florida, in comparison to control groups, youth and families receiving MST treatment demonstrated improved family relations and functioning, increased school attendance, decreased adolescent psychiatric symptoms, decreased adolescent substance abuse use and decreased long-term rates of re-arrest.

Probation Day Treatment programs are facility based and target youth on probation who are in need of a higher level of supervision and services. Youth participate in day treatment supervision, programming and education. Juvenile probation officers or counselors monitor progress of the youth at home, school and work and compliance with court sanctions. In addition, individual, family and small group counseling may be provided. Additional programs were authorized after this reporting period.

All day treatment programs are operated by providers under contract with the Department. Associated Marine Institutes (AMI) is the major provider of day treatment services at 19 locations across the state. Eight other providers offer similar services.

Conditional release services are provided to youth released from residential commitment programs. These programs assist with transitioning youth back into their homes and communities. Types of services include contracted day treatment services, contracted community supervision services, state-operated community supervision services, and residential vocational training.

Day treatment programs for youth on conditional release are similar to those serving youth at the front end of the system. Activities include on-site educational services, counseling, recreation, and community service projects. Community supervision services involve a DJJ juvenile probation officer or a case manager from a contracted program monitoring the progress of youth at home, school or work and compliance with other sanctions (curfew, community service, and restitution). Although length of supervision varies widely, most programs are designed to last three to seven months.

Post-Commitment Probation (PCP) is a statutorily defined probationary status for juveniles released from the custody of the Department but over whom the juvenile court has retained jurisdiction. Similar to probation, the objectives of PCP are to monitor behavior, direct juveniles to community services appropriate to their needs, and aid juveniles in recognizing alternatives to crime. The court must approve termination of PCP.

Post-Commitment Probation Residential programming is limited in this report to a single project designed to provide vocational training to youth released from residential commitment programs. Graceville Vocational Youth Center (GVYC) is a post-commitment probation residential vocational program. Operated by Twin Oaks Juvenile Development Inc., the program provides vocational training to youth who have completed a residential commitment program. The model was designed for young men leaving commitment programs who desire vocational certification. It is centered on teaching work ethics and responsibility as important components for success in the workforce, concentrating on five primary areas - vocational training, employability skills, independent living skills, education and community service.

The Redirection project was established by the state of Florida's Legislature and Department of Juvenile Justice to utilize community-based alternatives to traditional long-term residential commitment for Florida's youth. With funding from the Legislature, the Department established Redirection to create a less expensive, more effective sanction for delinquent youth. The two programs available through this project are Functional Family Therapy (FFT) and Multisystemic Therapy (MST). The Redirection project is currently offered in seven judicial circuits 1, 6, 9, 11, 17, and 18. The program will be expanded to 15 judicial circuits after the study period.

The Department of Juvenile Justice and Evidence-Based Associates (EBA), through local and judiciary input, established protocols for the program. Youth who would have received residential commitment may instead be referred to a Redirection program. It is projected that nearly 1,000 youth will be served by Redirection over a three-year period.

The Probation and Community Corrections branch is directly responsible for the majority of community-based services provided by the Department. Juvenile probation officers and senior juvenile probation officers are key frontline positions for service delivery and the source of referrals to the Redirection project. When a youth is ordered by the court to community supervision, he or she must remain crime-free and comply with a treatment plan. The Redirection project offers a new resource option that can be used by juvenile probation officers as a sanction for lack of compliance with the treatment plan.

Profile of Youth

The following tables provide demographic data taken from service history extracts and delinquency referral extracts developed from files in the Department's Juvenile Justice Information System (JJIS) Profile data is based on the number of youth who completed the program in FY 2004-05.

Day Treatment Programs

Day treatment programs are offered in two basic types: Model 1 programs are delivered in an alternative school setting with instruction for at least 5 hours per day, financed by the Florida Education Finance Program, and delinquency programming for at least 3 hours per day. Model 2 programs are offered in an afterschool setting with 3 hours of delinquency programming provided each day, usually during the high crime juvenile crime periods from 2:00 to 6:00 p.m.

Table 7-22

Program Evaluation

Juvenile Probation and Community Corrections programs are evaluated using the Department's quality assurance process following a set of standards developed specifically for these program types. Standards are based on the criteria set by national standards, state policy, and Florida Statutes. Program profile summaries, outcomes, and accountability measures are based on the number of youth who completed a program in FY 2005-06.

Quality Assurance Performance

The following table ranks all probation and community correction programs based on their 2006 QA performance score.

Probation and Community Corrections Quality Assurance Performance 2006

Rank	Circuit	County	Program Name	Program Type	QA Score

Outcome Evaluation Performance

Program outputs and outcomes, including total releases, the percentage of youth adjudicated for offenses committed during supervision (ODS), number of completions and completion rates, demographic characteristics, average length of stay, and recidivism rates, are presented in the following tables for each Probation and Community Corrections (PCC) program that released youth in FY 2004-05. Summary data are presented by individual program organized by program type.

During FY 2004-05, there were a total of 36,692 releases and 25,948 completions from ten PCC program areas:

Program Area	Releases	Completions
Intensive Diversion Delinquency Services (IDDS)	2,214	1,548
Early Delinquency Intervention Programs (EDIP)	266	149
Multi-Systemic Treatment Facilities (MST)	157	101
Probation	23,966	17,543
Special Intensive Probation	1,776	793
Day Treatment	1,202	777
Redirection	83	53
Conditional Release	5,221	3,776
Post-Commitment Probation	1,709	1,144
Post-Commitment Probation – Residential	98	64

Table 7-24

The rate of offenses during supervision ranged from a high of 44% of the releases from Day Treatment to a low of 11% from IDDS and Post-Commitment Probation-Residential. Completion rates varied from a high of 73% for Probation to a low of 45% from Special Intensive Probation.

The majority of youth who completed PCC programs during the year were male (75%), white (60%) and non-Hispanic (86%). The average age at admission was 16.2 years. In comparing program areas, MST programs had the highest percentage of females (33%) and Redirection programs had the highest percentage of black youth (64%) among those who completed the programs. The average age at admission increased along the continuum of services from Diversion (14 years), to probation (16 years) to conditional release and PCP (17 years).

Given that the PCC program areas serve a wide variety of youth, ranging from youth with no prior offense history to youth who have been committed, the substantial differences in the average prior

seriousness indices observed across the program areas are as expected. Youth completing IDDS, a diversion program, had the least serious delinquency histories; while youth who were previously committed completing conditional release and PCP had the most serious delinquency histories. Youth completing intensive programs such as Probation Special Intensive, Day Treatment and Redirection had more serious histories than youth completing general probation and MST.

Recidivism rates for Probation and Community Corrections programs varied by program area from 35% or higher for conditional release and MST, to less than 18% for IDDS and probation supervision. Probation supervision had a lower rate of recidivism (18%) than EDIP (29%) or MST (39%). The recidivism rate for youth completing Special Intensive Probation was 8 percentage points lower than for youth completing Day Treatment or Redirection (24% and 32% respectively). Youth completing PCP programs had less serious offense histories than youth who completed Conditional Release programs and correspondingly had fewer recidivists (26% and 35% respectively).
