

FLORIDA DEPARTMENT OF JUVENILE JUSTICE

Circuit 9

Detention Risk Assessment Instrument & Supervised Release Outcomes Report – 6 Month Overview

Background

The purpose of the DRAI is to determine the most appropriate placement for youth upon arrest. Youth taken into custody (arrested) by law enforcement are screened by the Department's detention screening staff using the DRAI to determine whether a youth should be detained in a secure detention facility prior to their detention hearing, placed on supervised release detention (community-based supervision) or released without any additional supervision. Youth appear before the court within 24 hours of being taken into custody, at which time the juvenile judge determines whether there is a need for continued detention.

In mid-December of 2018, the Department convened a meeting of the DRAI Committee. The committee was tasked with the evaluation and revision of the DRAI utilizing comprehensive data and research completed by a national juvenile justice research team. Membership, as required by Florida Statute, included an urban and rural appointee from the Conference of Circuit Judges of Florida, the Prosecuting Attorneys Association, the Public Defenders Association, the Florida Sheriffs Association and the Florida Association of Chiefs of Police. Request for committee membership appointees was made by the Department to the various committee associations. Members of the DRAI Committee included:

Conference of Circuit Judges	Honorable Angelica Zayas Circuit 11	Honorable David Gooding Circuit 4
Prosecuting Attorneys Association	Assistant State Attorney Rebecca Shinholser Circuit 8	State Attorney Ed Brodsky Circuit 12
Public Defenders Association	Public Defender Carlos Martinez Circuit 11	Assistant Public Defender Jeannie Moore Circuit 14
Florida Sheriffs Association	Sheriff Robert Gualtieri Circuit 6	Sheriff Arnold Lanier Circuit 10
Florida Association of Chiefs of Police	Chief Lawrence Leon Circuit 15	Chief Greg Graham Circuit 5

The new DRAI is designed to improve public safety by producing more accurate results, ensuring youth receive a risk score, and allowing for the use of expanded supervision options for youth who score in the middle category. Effective July 1, 2019, statute modifications allowed for the implementation of the new DRAI and the implementation of a continuum of community-based detention supervision options for youth who score in the middle range. This continuum of supervision is called supervised release (SR). Supervised release programs are designed to reduce

Ron DeSantis, Governor

Simone Marsteller, Secretary

The mission of the Department of Juvenile Justice is to increase public safety by reducing juvenile delinquency through effective prevention, intervention, and treatment services that strengthen families and turn around the lives of troubled youth.

the likelihood of failures to appear in court and/or the receipt of a new charge during the supervision of the program.

State-level predictive outcomes indicated that 60% of youth screened should receive the same outcome on the old and new instruments, but 40% of screened youth would receive a different outcome with the use of the new instrument. Let's take a look at some high-level preliminary data for the initial six months of the instrument's use.

6 Month Preliminary Data

The charts below provide an overview of the DRAI outcomes completed from July 1, 2019 until December 31, 2019.

CIRCUIT 9 DRAI OUTCOMES

** Release Range = 6 points or less, Supervise Release Range = 7-12 points, Secure Range = 13 or more

Data Highlights:

- More kids score for release than predicted while less youth score for secure
- More kids are placed in secure detention at screening than score for secure placement
- Detention hearing modifications appear to modify most placement to match DRAI Score

Upon completion of the scoring, the screener determines if the youth meets the criteria for any of the placement overrides. For overrides A – E, admission into secure detention is mandated, regardless of score, until a decision on appropriate continued supervision is made by the court during a detention hearing. For override F, the screener must read the direction provided by the court on a court order to determine the youth’s placement.

The chart below provides an overview of the impact of these overrides on screening placement outcomes.

*DV = Domestic Violence, PJO = Prolific Juvenile Offender

Data Highlights:

- Overrides A, B, D, and E have impacted placement at a statistically insignificant rate as predicted
- Override C: Higher levels of domestic violence cases resulting in secure detention in comparison to statewide averages
- Court orders mandating secure detention, regardless of score, have had a significant impact on secure detention placements
- 2% of court orders allowed for a placement other than secure detention

Circuit 9 Court Order Frequency by Type

*Miscellaneous = Information available in the Juvenile Justice Information System (JJIS) did not provide enough detail to determine the appropriate category for these orders

**Some youth were processed for multiple types of orders in one screening and are therefore counted in multiple categories

Circuit 9 Degree of Court Agreement with Score

Data Highlights:

- Court agrees with scoring outcome in majority of cases
- More overrides upward than downward

CIRCUIT 9 SUPERVISED RELEASE OVERVIEW

The data below reflects outcomes for the youth placed into a supervised release program between July 1, 2019 and January 31, 2020. Successful completion of supervised release means the youth remained crime free and appeared for court while participating in the program.

Number of Youth on Supervised Release	547
% of Successful Completions	90.1% (493)
% of Unsuccessful Completions	9.9% (54)
- New charge while supervised - 81.5% (44)	
- FTA while supervised - 27.8% (15)	
*shows percentage of failure attributed to each type	
*youth may be counted in both categories	

Special Note: Youth may be screened and ordered to a supervised release program in one circuit but live and receive supervision in another circuit.

On average, about 39 youth were on supervised release on any given day. On average youth were supervised for 17 days. During the initial six months, the Department finalized contracting for adequate staff availability in each circuit to properly supervise youth placed in these programs.

SUMMARY OF FACTS ABOUT DETENTION SCREENING & PRE-ADJUDICATORY SUPERVISION

1. The DRAI is only when a youth is taken into custody (arrested) and presented to the Department for screening.
2. The Department uses the instrument to determine the youth's detention status pending 24-hour detention hearing.
3. Youth can score for release or supervised release, but be placed in secure detention due to a placement override
4. Determinations for continued detention status are made by the court during the detention hearing.
5. All detention statuses (secure detention and supervised release) have a statutorily-based length of stay of up to 21 days (30 days in some special circumstances).

STATEWIDE DATA SUMMARY

1. Less youth score for secure detention (SD) than initially predicted
2. 24% more youth are placed into secure detention pending a detention hearing than score for secure detention placement. Half of these youth are released according to score at the detention hearing
3. While the impact of overrides A, B, D, and E on secure detention admissions is statistically insignificant, override F (court ordered mandates for SD placement) accounts for a significant amount of the overrides up to secure detention.
4. Circuit 9 also has a higher level of domestic violence cases resulting in secure detention placement in comparison to the statewide percentages.
5. 29% of the court orders screened were for Failures to Appear.
6. In about 81% of cases, courts placed youth according to their score at detention hearing
7. Statewide supervised release success rate = approximately 88%.
8. On average, youth were supervised on supervised release for about 16 days.

CIRCUIT 9 DATA SUMMARY

1. Less youth score for secure detention (SD) than initially predicted
2. 24% more youth are placed into secure detention pending a detention hearing than score for secure detention placement.
3. Post-detention hearing, 5% more youth remain in secure detention than score for this placement
4. While the impact of overrides A-E on secure detention admissions is statistically insignificant, override F (court ordered mandates for SD placement) accounts for a significant amount of the overrides up to secure detention.
5. 23% of the court orders screened were for Failures to Appear.
6. In about 90% of cases, courts placed youth according to their score at detention hearing
7. Circuit 9 supervised release success rate = approximately 90%.
8. On average, youth were supervised on supervised release for about 17 days.
